(54) MOBILE TERMINAL AND METHOD FOR MANAGING PDP CONTEXT IN ON-STATE AT ALL TIMES

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a mobile terminal capable of avoiding push data from being not arrived.

SOLUTION: A TAF (Terminal Adaptation Function) 15 transfers push data received from a PDP (Packet Data Protocol) context in an ON-state at all times terminated by an MTF (Mobile Termination Function) 16 in the mobile terminal 1 to a TCP/IP/ICMP (Transmission Control Protocol/Internet Protocol/ Internet Control Message Protocol) 14, protocol processing, and distributing the push data to PDAP 13. A PDP context management 17 has a processing logic to start with establishment of the PDP context in an ON-state at all times at application of power to the mobile terminal 1, at least to interrupt squelch for a long time (out-zone) and for a short time (out-zone), and to re-establish the PDP context in an ON-state at all times for estimating the case with receiving a PDP context non-operation request from a network.
